

Turn manual operations into measurable systems.

We design, build and improve enterprise software around the people and processes that matter.

What we help you do.

Software shaped around your operation, connecting service teams, existing systems and decision-makers.

Customer & citizen-service platforms

Self-service, case management, approvals and escalations that make services easier to access and manage.

Integration, automation & AI

Connect systems, process documents, route cases and assist frontline teams with operational knowledge.

Identity assurance

Active liveness, facial and fingerprint matching, image-quality checks and identifier validation within the service journey.

Operational intelligence

Connected reporting and governed data access, giving stakeholders a clearer view of progress, performance and exceptions.

A global outlook. A collaborative team.

Working across Nigeria, the United Kingdom and Canada, collaborating with clients wherever the work takes us.

COBRA.

A clearer path to retirement benefits.

Enrolment, verification and benefit preparation brought together, so accrued rights and contributions can be computed ahead of retirement.

AT A GLANCE

CLIENT

National Pension Commission
(PenCom)

LOCATION / STATUS

Nigeria · Delivered

BUILT FOR

Retirees, employers and pension
stakeholders

[Visit COBRA](#)

01 THE CONTEXT

The challenge.

Retirement-benefit processing depends on records and verification coming together. COBRA connects enrolment and employment history with the checks needed before payment can progress.

The impact.

Earlier benefit preparation

Prepare accrued-rights and contribution calculations ahead of retirement.

A clearer shared record

Stakeholders can follow relevant stages, outstanding information and decisions.

Verification in the workflow

Active liveness and identifier validation help resolve identity and record discrepancies.

Fewer disconnected follow-ups

Supporting records and verification sit within one service journey.

Enrolment / Verification / Preparation & visibility

Metron Analytics.

Turn questions into live dashboards.

A standalone analytics product that brings data exploration, reporting and governed sharing into one workspace.

AT A GLANCE

PRODUCT

Built by StellarSync

Adopt independently of a
bespoke software
engagement.

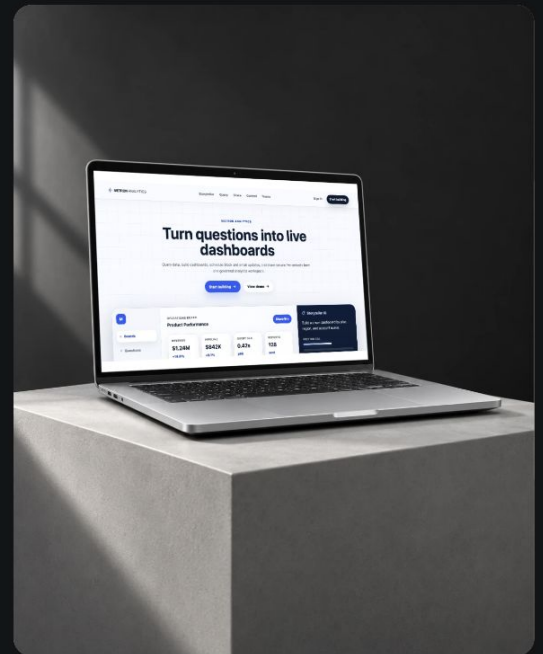

AVAILABILITY

Standalone product

BUILT FOR

Operations teams, analysts and
decision-makers

[Explore Metron](#)

01 THE CONTEXT

The challenge.

Having data is not the same as having an answer when a decision needs to be made. Metron connects questions, dashboards and reporting workflows, with access and sharing considered alongside analysis.

From question to insight.

Natural-language exploration

Start with a question to explore operational data and develop useful views.

Scheduled delivery

Arrange recurring updates around the organisation's reporting rhythm.

Live dashboards

Bring metrics and visualisations together in a shared reporting workspace.

Governed sharing

Give the right teams access to relevant insights through controlled sharing.

Pencas.

Connected participants. Shared visibility.

A new pension platform bringing RSA holders, employers, PFAs, PFCs and PenCom into a connected service environment.

AT A GLANCE

PROJECT

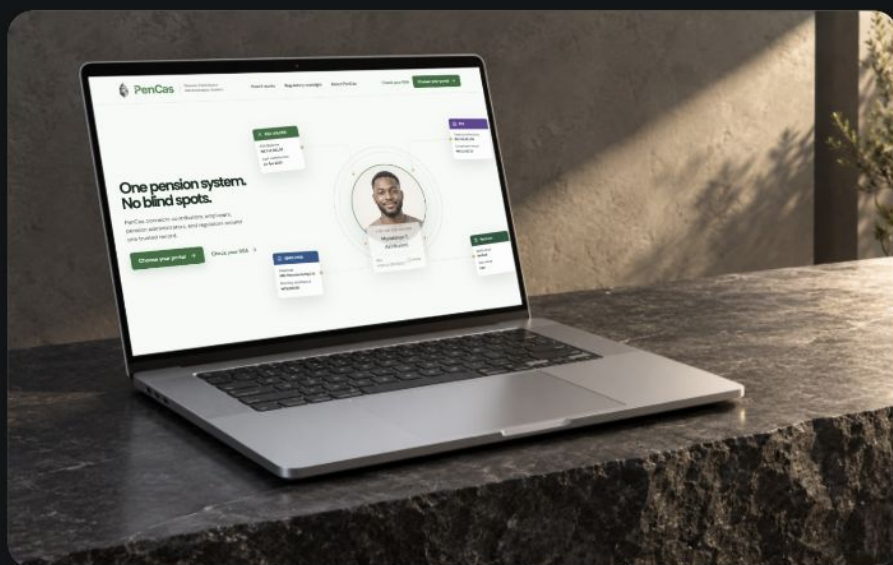

New Pencas platform

STATUS

In development
Planned December 2026

SCOPE

Employer registration, pension remittance and RSA-holder self-service

Preview of the new build, not the existing production version. Staging visuals may change before launch.

01 THE CONTEXT

The challenge.

Pension administration spans many participants and responsibilities. The new Pencas platform is being built to connect employer and contributor services with the institutions that administer pension assets.

The planned platform.

Employer registration

Support employer-code registration as an entry point to pension remittance.

RSA-holder self-service

Give contributors a digital route to relevant pension services.

Pension remittance

Connect employers with monthly pension-remittance processes for their staff.

Shared institutional visibility

Connect PFAs, PFCs and PenCom around their roles and responsibilities.

Employers / RSA holders / Pension institutions

Start with the operation. Build the right system.

Shared understanding. Visible progress. Considered delivery.

01	Understand	Map the operation, people and constraints.
02	Define	Agree the scope, outcomes and delivery priorities.
03	Design and build	Review working software together in controlled phases.
04	Launch	Prepare, test and transition into operation.
05	Support and improve	Adapt the system as needs change, with ongoing support and improvements.

Scope and timing vary by engagement; discovery establishes the right delivery plan.

Designed for your environment.

Identity, access & control

Role-based access, audit trails, encryption and retention controls scoped to the system. Integrations can include Active Directory and OAuth.

Hosting & technology

Client-controlled or managed hosting. Open-source models and specialist integrations chosen around your environment, risk and budget.

Bring us one process worth improving.

A complimentary discovery call with our product and delivery team.
